

UNDER THE STARS

Imagery:

Shooting Star, Constellations, Outer Space, Galaxy, North Star, Wish upon a star, Twinkle Twinkle

SET DESIGN:

We will utilize 7-10 moveable stages with a shining STAR graphic on the top of each one.
(4ft X 4ft)

These frames could be purchased, or you could simply make a rolling square stage with large enough wheels to move around the field. We would cover with digitally printed vinyl.

If making in house, Be sure to get strong casters so they can be pushed on the field easily.

I suggest them all being the same height off the ground, not necessarily like this picture of the frames.

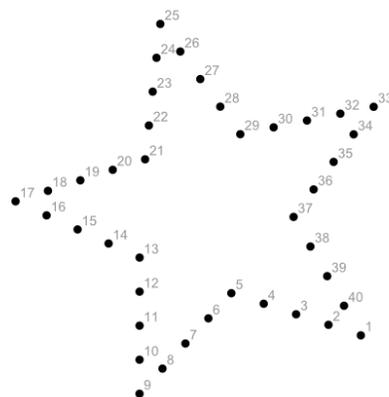

Front side props (Optional)

They are designed here and tie in the star images of the props and flags.

Constellations that we will use in the staging are also included in this design.

Another Option: Create a STAR shaped stage/platform that has wheels under it.

- Function of props:
 - Create stages to draw focus for individual or small group efforts.
 - Use the STAR on each one to create various forms that look like constellations. The band members and/or color guard members would “connect” the stars to create the pictures.
 - Big Dipper, Little Dipper, Orion Base shape, STAR shape, etc... (see images below)
 - Can end the show with band & props in giant STAR SHAPE—props on the tips of the stars. Guard in center... or on outsides spread out all over the field... depending on size of guard.

Shooting Star Moment in Movement 2

- Create a moment where the entire band and guard stops and looks from left to right/ up and over---as if their eyes are following a giant shooting star. Eyes could lead to the introduction of a STAR flag on the field.
- Could also create an airborne streamer effect to look like an actual shooting star. Many ways to play with this idea. One simple way could be to have a giant silver streamer attached to a weighted ball or frisbee type apparatus and THROW it across the field to visualize the shooting star idea. If you have handy prop parents---you could play with hydraulics for this effect as well.

HANDHELD STAR PROP FOR SOLOIST

- Create a 2 ft STAR that is painted and/or lined with LED lights that the soloist could dance with in the second movement. At the end of the show you can LIGHT IT UP.
